Is Kubernetes a Platform?

Dev and Ops Equilibrium

Team Cognitive Load

Team Interactions

Zeb Palmer at #Kubecon

@zebpalmer

Replying to [@manupaisable](#)

I mean... I love kubernetes / [#kubecon](#)...

But it can all be replaced by something better next week.

See openstack.

pretty sure the last openstack conference I was at had 9k people & every tech org pimping it is here*

Now?

[Melanie Cebula](#), infrastructure engineer at Airbnb, gave a [talk at QCon London](#) [\[slides PDF\]](#) about the internal tooling and strategies Airbnb adopted to support over 1000 engineers concurrently configuring and deploying over 250 critical services to Kubernetes (at a frequency of about 500 deploys per day on average). One key enabler was a layer of abstraction and generation of Kubernetes configuration from higher level primitives using standardized environments and namespaces (and automated validations whenever possible). Also critical was the automation of common workflows for engineers and using the same tools across all environments.

Kubernetes “platform”

**microservices
ops complexity**

Kubernetes “platform”

**deploy & run
abstractions**

Still need to...

... set up hosts

... create/destroy clusters

... update to new K8s versions

... decide on namespaces vs clusters

<insert your fav chore here>

Who is responsible ?

Who is responsible ?

Who is impacted ?

“A digital platform is a foundation of self-service APIs, tools, services, knowledge and support which are arranged as a compelling internal product.”

– Evan Bottcher, 2018

*Kubernetes is not your
platform. It's the foundation.*

Kelsey Hightower ✓

@kelseyhightower

If I had to do it all over again, I might leverage something like Kubernetes, but it would be hidden underneath some change management system, and would be considered an implementation detail.

Kelsey Hightower ✓

@kelseyhightower · Oct 1

Thinking back, I was able to do 95% of what we call Cloud Native with a bunch of VMs, an application server, and configuration management tools.

Once I integrated with the change management process so could the rest of the organization.

Platform team

Platform Purpose

**enable stream-aligned
teams to deliver work
autonomously with self-
service capabilities ...**

Platform Purpose

... in order to reduce
extraneous cognitive load
on stream-aligned teams

Treat the platform as a product

Reliable Fit for Purpose Focused on DevEx

Reliable Platform

on-call support
service status pages
suitable comms channels
response time for incidents
downtime planned & announced

Fit for Purpose Platform

prototyping
fast, regular feedback
agile, iterative practices
few(er) services, high(er) quality
skilled product management

#DevEx Focused Platform

Speak the same language
right level of abstractions
simplify, simplify, simplify

Adam Jacob

@adamhjk

Docker was a transformational user experience, one that remains unmatched today. Ask anyone running k8s if they wished it worked like that first 'docker run'. The answer is yes.

AGREE OR DISAGREE

BUILD

I can effectively build my software.

I have the tools to validate my software.

DELIVER

I can reliably deliver my software to dev, stage, and prod.

I can efficiently manage my cloud infrastructure.

RUN

I can measure the operational metrics of my services.

I understand the cost of running my service.

COMPELLING

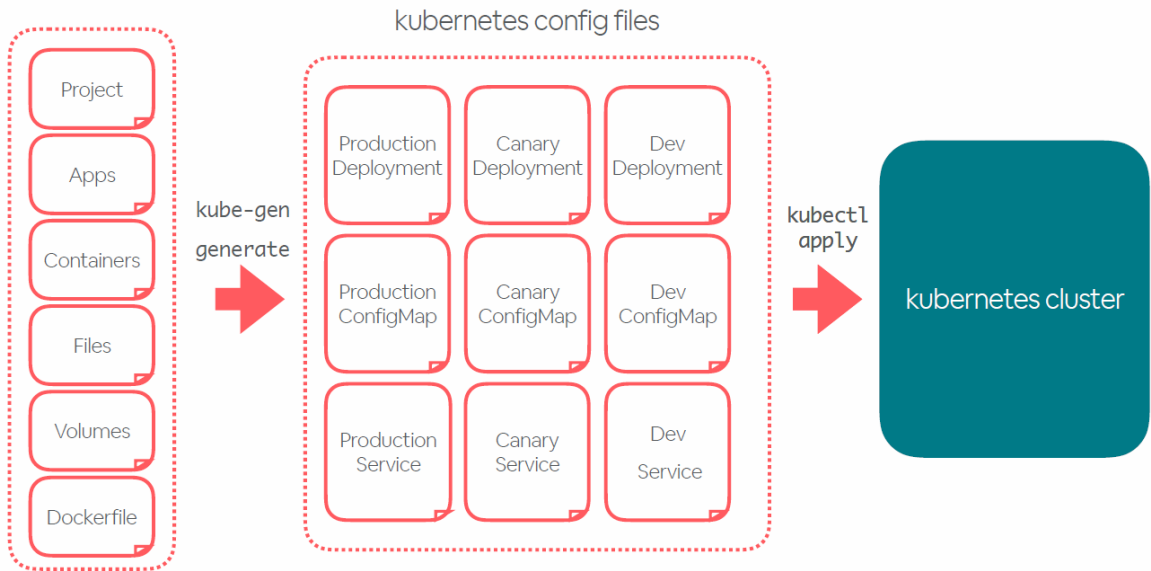

I feel platform tools are consistently improving.

I can voice problems that result in improvements.

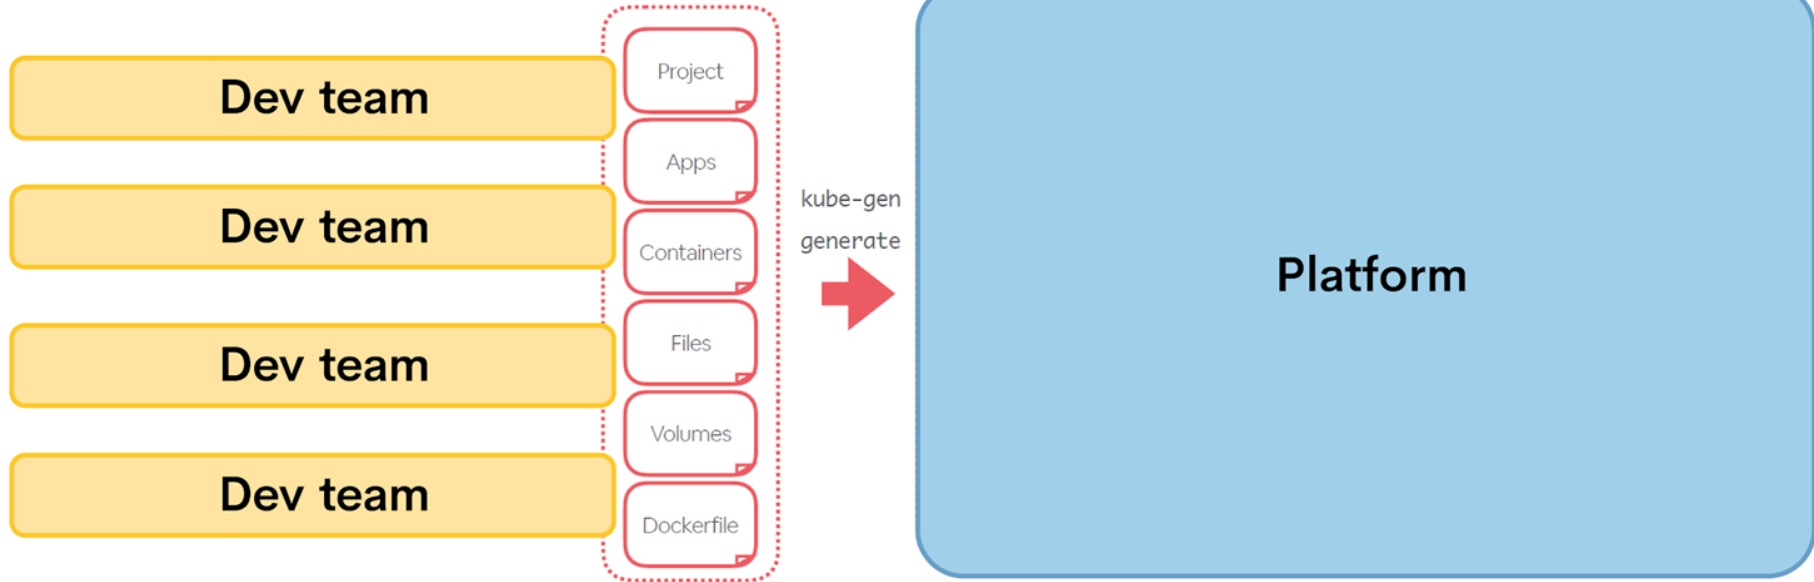

My tools are best in class.

Infrastructure team

Getting started with team-centric Kubernetes adoption

1 - Assess cognitive load

How well can the team understand the platform/Kubernetes abstractions they need to use on a regular basis?

2 - Define your platform

What's the gap between your Kubernetes implementation and an internal digital platform?

3 - Team Interactions

Who is responsible for what? Who is impacted? How do you collaborate on new platform internal services?

Collaboration vs X-as-a-Service
